

Chaudhary Ranbir Singh University, Jind
(Established by the State Legislature Act-28 of 2014)

**Scheme and Syllabus of Examination
for
Post Graduate Programme**

M.Sc (Chemistry)

as per NEP 2020

Curriculum and Credit Framework for Postgraduate Programme

**With Multiple Entry-Exit, Internship and CBCS-LOCF
With effect from the session 2024-25 (in phased manner)**

DEPARTMENT OF CHEMISTRY
FACULTY OF PHYSICAL SCIENCES

CHAUDHARY RANBIR SINGH UNIVERSITY, JIND -126102

HARYANA, INDIA

Chaudhary Ranbir Singh University, Jind
Scheme of Examination for Postgraduate Programme 2024-25
as per NEP 2020 Curriculum and Credit Framework for Postgraduate Programmes
(CBCS-LOCF) with effect from the session 2024-25 (in phased manner)

Framework-2
Scheme-P

Semester	Course Type	Course Code	Nomenclature of course	Theory (T)/ Practical (P)	Credits		Contact hours per week				Internal Assessment Marks	End Term Examination Marks	Total Marks	Examination hours

N.B.

- i) For seminar, the group size will be 10-15.
- ii) In the third semester of the course, students will be provided with the option to opt among practical and project work.
- iii) The department will announce the number of available seats for opting for project work at the end of the first semester, taking into account the availability of eligible faculty (regular or contractual).
- iv) The department will assign project supervisors to students based on their performance in the first semester of the course. The results of the first semester will be considered if the number of students opting for projects exceeds the available seats.
- v) An Assistant Professor, Associate Professor and Professor can supervise a maximum of four, six and eight students, respectively.
- vi) Students may opt to complete MOOC courses equivalent in credit to those specified under DEC-1, DEC-2, DEC-3, and DEC-4. MOOCs through SWAYAM and other such portals approved by UGC and registered on ABC/APAAR. Fee for such online courses has to be paid by the student her/himself. However, students must inform the department both prior to enrolling in the MOOC and after successfully completing the course.

Session: 2024-25			
Part A - Introduction			
Name of Programme	M.Sc (Chemistry)		
Semester	1 st		
Name of the Course	Inorganic Chemistry- I		
Course Code	M24-CHE-101		
Course Type	CC		
Level of the course	400-499 of 500-599 ✓		
Pre-requisite for the course (if any)			
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1. Analyze the formation and stability of metal-ligand complexes in different solvents.</p> <p>CLO 2. Describe the importance of chelating ligands in increasing the stability of complexes.</p> <p>CLO 3. Discuss examples of chelates and their applications in various fields.</p> <p>CLO 4. Explain the mechanisms involved in the formation and transformation of transition metal complexes.</p> <p>CLO 5. Apply kinetic analysis to understand reaction rates and mechanisms</p> <p>CLO 6. Describe the chemistry of allotropes of carbon and important compounds belonging to nitrogen and phosphorous group.</p> <p>CLO 7. Examine the role of transition metals in catalysis, both in industrial processes and biological systems.</p>		
Credits	Theory	Practical	Total
	4	0	4
Teaching Hours per week	4	0	4
Internal Assessment Marks	30	0	30
End Term Exam Marks	70	0	70
Max. Marks	100	0	100
Examination Time	3 hours		
Part B- Contents of the Course			
Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	<p>Chemical Dynamics-I</p> <p>Effect of temperature on reaction rates, Rate law for opposing reactions of 1st and 2nd order, Rate law for consecutive & parallel reactions of 1st order reactions, Collision theory of reaction rates and its limitations, steric factor, Activated complex theory, Ionic reactions: single and double sphere models, influence of solvent and ionic strength, the comparison of collision and activated complex theory.</p>	15
II	<p>Chemical Dynamics – II</p> <p>Chain reactions: hydrogen - bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane. Photochemical reactions (hydrogen - bromine & hydrogen -chlorine reactions). General treatment of chain reactions (ortho -para hydrogen conversion and hydrogen - bromine reactions), apparent activation energy of chain reactions, chain length, Rice-Herzfeld mechanism of organic molecules decomposition (acetaldehyde) Branching chain reactions and explosions (H₂ - O₂ reaction). Kinetics of (one intermediate) enzymatic reaction: Michaelis - Menten treatment, evaluation of Michaeli's constant for enzyme - substrate binding by Lineweaver - Burk plot and Eadie- Hofstee methods. Competitive and non-competitive inhibition.</p>	15
III	<p>Thermodynamics-I</p> <p>Brief overview of first and second Law of thermodynamics. Entropy changes in reversible and irreversible processes, variation of entropy with temperature . pressure and volume. entropy concept as a measure of unavailable energy and criteria for the spontaneity of reaction; free energy, enthalpy functions and their significance, criteria for spontaneity of a process; partial molar quantities (free energy, volume, heat concept), Gibb's-Duhem equation. Clausius -Clapeyron equation; law of mass action and its thermodynamic derivation.</p>	15
IV	<p>Electrochemistry-I</p> <p>Ion - Ion Interactions: The Debye - Huckel theory of ion - ion</p>	15

JR

A

Unit	Topics		Contact Hours
I	Stereochemistry-I Symmetry elements, D-L, R-S, E-Z and threo-erythro nomenclature, interconversion of Fischer, Newman, Sawhorse and flying wedge formulae. Conformational analysis of cycloalkanes, decalins, effect of conformation on reactivity, conformation of sugars, steric strain due to unavoidable crowding. Axial and planer chirality, optical isomerism in allenes, biphenyls (atropoisomerism), spiranes, hemispiranes. elementary		15

14

	ideas about stereochemistry of tertiary amines, quaternary salts, sulphur and phosphorous compounds.	
II	Stereochemistry –II Methods of resolution, optical purity, Topicity of ligands and faces, their nomenclature and prostereoisomerism, stereogenecity, chirogenicity, pseudoasymmetry and prochiral centre. stereospecific and stereoselective reaction. Elementary idea of principle categories of asymmetric synthesis, Cram's rule and its modification, Prelog rule. Molecular dissymmetry and chiroptical properties.	15
III	Nature of Bonding in Organic Molecules Aromaticity in benzenoid and non-benzenoid compounds, Huckel's rule level of n-molecular orbitals, annulenes, antiaromaticity, homoaromaticity. Bonds weaker than covalent, crown ether complex and cryptands, inclusion compounds, cyclodextrins, catenanes and rotaxanes. Reaction mechanism and Reactive Intermediates Linear free energy relationships and their applications (Hammett equation and modifications). Generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbene and nitrenes..	15
IV	Reactions of free radicals Types of free radical reactions, free radical substitution mechanism, mechanism at an aromatic substrate, neighbouring group assistance. Reactivity for aliphatic and aromatic substrates at a bridgehead. Reactivity in the attacking radicals. The effect of solvents on reactivity. Allylic halogenations using NBS, oxidation of aldehydes to carboxylic acids, autooxidation, coupling of alkynes and arylation of aromatic compounds by diazonium salts. Sandmeyer reaction. Free radical rearrangement. Hunsdiecker reaction.	15

Session: 2024-25			
Part A - Introduction			
Name of Programme	M.Sc (Chemistry)		
Semester	1 st		
Name of the Course	General Spectroscopy		
Course Code	M24-CHE-104		
Course Type	CC		
Level of the course	400-499		
Pre-requisite for the course (if any)			
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1: Understand the interaction of electromagnetic radiation with molecules</p> <p>CLO 2: Understand the Rotational, vibrational and electronic spectra for di atomic and polyatomic molecules</p> <p>CLO 3: Know about Raman Effect and its applications</p> <p>CLO 4: Gain the knowledge of NMR spectra analysis for organic and Inorganic compounds</p> <p>CLO 5: General awareness about the IR, UV-vis principles</p>		
Credits	Theory	Practical	Total
	3	0	3
Teaching Hours per week	3	0	3
Internal Assessment Marks	25	0	25
End Term Exam Marks	50	0	50
Max. Marks	75	0	75
Examination Time	3 hours		
Part B- Contents of the Course			
Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.			
Unit	Topics	Contact Hours	
1	<p>Electromagnetic radiation, interaction of electromagnetic radiation with matter, regions of the Spectrum the width and intensity of spectral transitions. Resolving power.</p> <p>Rotational Spectra</p> <p>The rotation of molecules, The Born-Oppenheimer Principle, rotational spectra of diatomic molecules, Selection rule for rotational/microwave spectrum, determination of bond-length, intensity of spectral lines, effects of isotopes on rotational spectra, Non-rigid rotator, Stark effect, Nuclear spin interactions, rotational spectra of linear and symmetric top</p>	11	

JA 17

Handwritten signatures and initials are present below the page number.

	polyatomic molecules, application of microwave spectroscopy.	
II	<p>Vibrational and Vibrational- Rotational Spectra</p> <p>The vibrating diatomic molecule; simple harmonic vibrations, anharmonicity of vibrations, the diatomic vibrating rotator, the interaction of rotations and vibrations the vibrations of polyatomic molecules, analysis by infrared technique.</p> <p>Electronic Spectra</p> <p>Electronic spectra of diatomic molecules, vibrational course structure, and rotational fine structure of electronic band. The Frank- Condon principle, intensity of vibrational-electronic band, dissociation energy, the Fortrat diagram.</p>	11
III	<p>Raman Spectroscopy</p> <p>Quantum theory of Raman effect, Classical theory of Raman effect, Pure rotational Raman spectra, Raman activity of vibrations, vibrational Raman spectra, polarization of light and Raman effect, applications.</p> <p>Introduction to Organic Spectroscopy: Principles and Applications of UV, IR and NMR Spectra in the structure elucidation of Organic Compounds</p>	11
IV	<p>NMR Spectra for Organic Compounds</p> <p>Spin active nuclei, chemical shift, shielding and deshielding, internal standards, spin-spin coupling, equivalent and non- Equivalent Protons, effect of changing solvents and hydrogen bonding on chemical shifts, anisotropic effect.</p> <p>NMR spectra for Inorganic Compounds</p> <p>Applications of spin-spin coupling to structure alignment of inorganic compounds, evaluation of reaction rates of fast exchange reactions. The double resonance technique. Application of infra-red spectroscopy to the determination of inorganic compounds.</p>	12

Session: 2024-25			
Part A - Introduction			
Name of Programme	M.Sc (Chemistry)		
Semester	2 nd		
Name of the Course	Green Chemistry & Sustainable Chemistry		
Course Code	M24-CHE-204		
Course Type	CC		
Level of the course	400-499		
Pre-requisite for the course (if any)			
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1) To foster an understanding of the principles and practices of green chemistry.</p> <p>CLO 2) To apply green chemistry principles in practical scenarios, promoting innovation in sustainable chemical processes.</p> <p>CLO 3) Students will gain a comprehensive understanding of non-conventional energy resources and waste management techniques, including their classification, advantages, disadvantages, and applications in sustainability.</p> <p>CLO 4) Students will develop an understanding of the industrial applications of various solvents and catalysts, along with the fundamentals of intellectual property rights, particularly in relation to patenting inventions in the chemical field.</p> <p>CLO 5) Understand the concept of supramolecules, which are complexes formed through non-covalent interactions between molecules.</p> <p>CLO 6) Explore different types of interactions, including hydrogen bonding, van der Waals forces, ionic interactions, and π-π stacking that stabilize supramolecular structures.</p> <p>CLO 7) Learn principles of underlying molecular devices and their potential applications in electronics and computing.</p>		
Credits	Theory	Practical	Total
	3	0	3
Teaching Hours per week	3	0	3
Internal Assessment Marks	25	0	25
End Term Exam Marks	50	0	50
Max. Marks	75	0	75
Examination Time	3 hours		
Part B- Contents of the Course			
Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each			

unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	<p>Green Chemistry</p> <p>Definition, need and goals. Green chemistry and its interdisciplinary nature, atom economy, twelve principles of green chemistry and its applications. Elementary idea of green reagent, green solvent, green catalyst. Introduction to biocatalysts, role of biocatalysts in green synthesis- enzyme catalyzed oxidation, reduction and hydrolytic reactions, synthesis involving basic principle of green chemistry- synthesis of adipic acid and BHC.</p>	11
II	<p>Sustainable energy resources:</p> <p>Various non-conventional energy resources- Introduction, availability, classification, relative merits and demerits. Solar Cells: Theory of solar cells. Solar cell materials, solar cell array, solar cell power plant, limitations.</p> <p>Waste management: production, problem and prevention</p> <p>Introduction, source of waste from chemical industry, waste minimization techniques, onsite waste treatment, design for degradation of DDT & surfactant, polymer recycling.</p>	20 11
III	<p>Industrial Solvent:</p> <p>Industrial uses of Aqueous Solvents, Super Critical Fluids, and Ionic liquids</p> <p>Homogenous and Heterogenous Catalysis:</p> <p>Phase Transfer Catalysis (PTC), Hydroformylation, Metathesis, Zeolite usage in Menthol synthesis, Caprolactam synthesis.</p> <p>Brief introduction to IPR, need for patenting, conditions for invention to be patentable.</p>	12
IV	<p>Supramolecules</p> <p>Molecules and Supramolecules, supermolecules, nature of supramolecular interactions, host-guest chemistry, solvation and hydrophobic effect, Utilisation of H-bonds to create supramolecular structures, Thermodynamic and Kinetic selectivity, Chelate and macrocyclic effects, Template synthesis</p>	11

Application of Supramolecules			
Molecular device, reading signal from molecular device, molecular electronic and photonic devices, molecular computers and molecular machines.			
Total Contact Hours			45
Suggested Evaluation Methods

Unit	Topics		Contact Hours

I	<p>Ultraviolet and Visible Spectroscopy</p> <p>Introduction and understanding of UV phenomenon, Various electronic transitions (185-800 nm), Beer-Lambert law, Chromophores, Auxochromes, Bathochromic and Hypsochromic shift, Hyperchromic and Hypochromic effect, effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fieser-Woodward rules for conjugated dienes and carbonyl compounds.</p> <p>Infrared Spectroscopy</p> <p>Principle and Theory, Modes of stretching and bending vibrations, Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and Fermi resonance. Problems related to IR spectroscopy.</p>	15
II	<p>Nuclear Magnetic Resonance Spectroscopy</p> <p>General introduction: Theory and basic principles of NMR, Chemical shift: Definition, mechanism of measurement, shielding mechanism, factors affecting chemical shifts, chemical shift values and correlation for protons bonded to carbon (aliphatic, olefinic, aldehydic and aromatic) and other nuclei (alcohols, phenols, enols, carboxylic acids, amines, amides & mercapto). Spin-Spin coupling: Theory, splitting patterns, coupling constants and their significance, magnetic and chemical equivalence, factors affecting coupling constant, complex spin-spin interaction between two, three, four and five nuclei (first order spectra). Hindered rotation and NMR: Temperature effects and splitting patterns. Spin system: Pople notation. Second order spectra, Virtual coupling, Stereochemistry: concept of topicity, effect of enantiomeric and diastereomeric protons.</p> <p>¹⁹F and ³¹P-NMR: An overview and heteronuclear couplings.</p> <p>Tools for simplification of complex NMR spectrum (chemical and instrumental):-Deuteration, changing solvent, trifluoroacetylation, basification and acidification, lanthanide shift reagents, increased magnetic field strength, double resonance and nuclear overhauser effect (NOE), variable temperature probe.</p> <p>2D-NMR spectroscopy: Principle, comparison with 1D-NMR, informations provided by 2D-NMR experiments: COSY, NOESY, HSQC and HMBC.</p>	15

III	<p>Mass Spectrometry</p> <p>Introduction, ion production - EI, CI, FD and FAB, Mass spectral fragmentation of organic compounds, common functional groups, molecular ion peak, metastable peak, Nitrogen rule, molecular weight determination molecular formula from isotopic ratio data, isotope profile of halogen compounds, fragmentation pattern - simple cleavage, retro-Diels Alder, Hydrogen transfer rearrangement like scrambling, ortho effect, McLafferty rearrangement, fragmentation patterns of hydrocarbons, alcohols, phenols, ethers, aldehydes, ketones, esters, carboxylic acids, amines, nitro, amides, nitriles.</p>	15
IV	<p>Carbon-13 NMR Spectroscopy</p> <p>General considerations: Comparison between ¹H and ¹³C-NMR, Proton coupled and proton-decoupled ¹³C-NMR, Chemical shifts for different carbon environments (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon), Coupling constants, Nuclear Overhauser effect in ¹³C-NMR. Introduction to DEPT NMR and information provided by various DEPT experiments (DEPT-45, DEPT-90, and DEPT-135).</p> <p>Composite Problems</p> <p>Problems involving the application of the above spectroscopic techniques (UV/Visible, IR, NMR and Mass) for structural elucidation of organic molecules.</p>	15

The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.			
Unit	Topics		Contact Hours
1	Vibrational Spectroscopy: Spectra and symmetry, Selection rule, Symmetry and shapes of AB ₂ , AB ₃ , AB ₄ , AB ₅ and AB ₆ , modes of bonding of ambidentate ligands, ethylenediamine and diketonate complexes, changes in spectra of donor molecules on coordination,		15

	change in symmetry on coordination, bond strength frequency shift relations, Use of symmetry to determine the number of active infrared and Raman lines. Application of resonance Raman Spectroscopy particularly for the study of active sites of metalloproteins as myoglobin and haemoglobin.	
II	Electron Spin Resonance Spectroscopy: Principle, Presentation of the spectrum, hyperfine coupling, hyperfine splitting in various structures, Factors affecting magnitude of g, zero field splitting and Kramer's degeneracy, Applications to transition metal complexes having one and more than one unpaired electron, applications to inorganic free radicals, study of electron exchange reactions.	15
III	Mossbauer Spectroscopy: Basic Principles, spectral display, isomer shift, factors affecting the magnitude of isomer shift, quadrupole and magnetic hyperfine interaction, applications of technique to the study of bonding and structure of Fe^{2+} , Fe^{3+} ; Sn^{2+} and Sn^{4+} compounds; detection of oxidation states, nature of M-L bond. Mass Spectrometry: Principle, representation, interaction of molecule with high energy electrons, interpretation of mass spectrum, effect of isotopes on appearance of mass spectrum; applications- finger print application, molecular weight determination, evaluation of heat of sublimation of high melting solids.	15
IV	Electronic Spectroscopy UV-visible molecular absorption spectroscopy (principle, instrumentation, and applications), Frank- condon Principle, molecular luminescence spectroscopy (fluorescence, phosphorescence, chemiluminescence) Nuclear Magnetic Resonance Spectroscopy: ^{19}F and ^{31}P NMR spectra – Chemical shifts, coupling constants, ^{19}F Spectra of fluoroacetone, 1-bromo-1-Fluoroethane, dimethyl phosphorus trifluoride and bromine pentafluoride ; ^{31}P spectra of HPF_2 , $\text{HPO}(\text{OH})_2$, $\text{H}_2\text{PO}(\text{OH})$, cis- $\text{Pt}(\text{Pet}_3)_2\text{Cl}_2$, Application of ^{31}P NMR for structural determination of Complexes with phosphorus ligands.	15

Spectra of Paramagnetic materials: Contact shift, its origin and application, Pseudo contact shift, Diamagnetic complexes, Spectra of free radicals, Lanthanide shift Reagents, Magnetic susceptibility Measurement.

DEC-2

Session: 2024-25

Part A - Introduction

Name of Programme	M.Sc. Chemistry		
Semester	III		
Name of the Course	Inorganic Chemistry Special- II		
Course Code	M24-CHE-306		
Course Type	DEC		
Level of the course	500-599		
Pre-requisite for the course (if any)	Chemistry at the level of 400-499		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1: Understand the structure, stability, and decay behavior of atomic nuclei, including nuclear models and radioactivity kinetics.</p> <p>CLO 2: Classify and compare inorganic polymers with organic polymers and explain the synthesis and properties of key inorganic polymer systems.</p> <p>CLO 3: Explain the behavior of non-aqueous solvents and the kinetics and mechanisms of coordination reactions occurring in such media.</p> <p>CLO 4: Describe the role of essential metals in biological systems and evaluate their use in treating metal deficiency and cancer-related conditions.</p> <p>CLO 5: Analyze the medical applications of inorganic compounds, including treatment of thyroid disorders, dental care, psychiatric conditions, and heavy metal detoxification.</p>		
Credits	Theory	Practical	Total
	4	0	4
Teaching Hours per week	4	0	4
Internal Assessment Marks	30	0	30
End Term Exam Marks	70	0	70
Max. Marks	100	0	100
Examination Time	3 hours		

Part B-Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	<p>Nuclear Chemistry</p> <p>Fundamental particles of nucleus: concept of nuclides, representation of nuclides, Isobars and isotopes specific examples, the size concept of nucleus and atom. The possible forces operating between (n-n, p-p, n-p) and the magnitude of nuclear forces (short range); qualitative idea of the stability of nuclear (n/p ratio), shell and liquid drop models; natural and artificial radioactivity disintegration series; Radioactive disintegration</p>	15

	rate, half life, average life.	
II	<p>Inorganic Polymers Classification, types of inorganic polymerization, comparison with organic polymers, boron-nitrogen polymers, silicones, coordination polymers, phosphorus-nitrogen compounds.</p> <p>Non-aqueous Solvents Reaction in non-aqueous media with respect to H₂SO₄, BrF₃, N₂O₄ and phosphoryl chloride; Kinetics and mechanism of coordination reactions in non-aqueous media.</p>	15
III	<p>Metals in Medicine: Biochemical bases of essential metal deficient diseases; Iron, copper and zinc deficiencies and their therapies, carcinogens and carcinostatic agents, zinc in tumour growth and inhibition, anticancer activity and mechanism of platinum complexes, anticancer activity of Rhodium, copper and Gold complexes, anti cancer activity of Selenium, antibacterial and antiviral properties of metal complexes, polyamino carboxylic acids and polyethylene amines as chelating drugs.</p>	15
IV	<p>Miscellaneous applications of Inorganic compounds as medicines Drugs in hypo and hyper activity of thyroids, Inorganic drugs in dental carries, clinical disorders of alkali and alkaline earth metals and their remedies, lithium drugs in psychiatry.</p> <p>Heavy metals in Biological systems Toxicity of heavy metals – and their detoxification, role of Selenium in Biological systems with reference to its essentiality and toxicity, mechanism of metal ion induced toxicity, interaction between orally administered drugs and metal ions in gut.</p>	15

Part B- Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist of at least 4 parts covering the entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	<p>Quantum Mechanics-II</p> <p>Problem of two electrons, exchange interactions. Approximate methods: First order time-independent perturbation theory for non-degenerate states. Variation theorem and variational methods. Ground and excited state of helium atom. Coupling of angular momentum for many electrons system, spin-orbit coupling, Molecular Term symbols. Born-Oppenheimer approximation, the hydrogen molecule ion, the hydrogen molecule, their symmetric and antisymmetric solution (without actual evaluation of various integrals). Self-consistent field method.</p>	15
II	<p>Quantum Mechanics-III</p> <p>Valence bond and MO (LCAO) treatment of hydrogen molecule. Comparison of the MO and VB treatments and their equivalence limit. Configuration Interaction. Extension of MO theory to other systems- Homonuclear and heteronuclear diatomic, simple polyatomic molecules. The pi-electron approximation, Huckel theory of conjugated systems. Applications to ethylene, butadiene, cyclobutadiene and cyclopropenyl molecules. Calculation of properties- Delocalization energy, electron density, bond order. Ab initio and Semi-Empirical Methods for Closed Shell Systems.</p>	15

III	Photochemistry Revision of basic concepts of photochemistry, Lifetimes of excited electronic states of atoms and molecules. Charge transfer transitions. The Frank-Condon principle, emission spectra, environment effect on absorption and emission spectra, Wigner's spin conservation rule. Modes of decay of excited states, quenching of fluorescence, delayed fluorescence, collisional quenching, Stern-Volmer equation. Excimer and exciplex formation and decay.	15
IV	Quantum Photochemistry Types of Photophysical Pathways, Radiative and Non-Radiative transitions, Einstein Treatment of Absorption and Emission Phenomena, Probability of Induced Emission and Its Application to Lasers, Time-dependent Schrödinger equation, Time-dependent perturbation theory for photochemical systems, Transition moment integral. Theoretical Absorption Intensity, Oscillator Strength, Rules governing the transition between two energy states.	15

The compulsory question (Question No. 1) will consist of at least 4 parts covering the entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Non-equilibrium Thermodynamics Meaning and scope of irreversible thermodynamics. Thermodynamic criteria for non-equilibrium states, Phenomenological laws-linear laws, Gibb's equation, Onsager's reciprocity relation, Entropy production-specific laws of entropy production, Entropy production due to heat flow, mass transport, chemical reaction, non-equilibrium stationary states, Prigogine's principle of maximum entropy production, Coupled phenomena. Some important applications.	15
II	Kinetics of Fast Reactions General treatment of chain reactions, apparent activation energy of chain reactions, chain lengths, theories of branching chain and explosion (hydrogen-oxygen reaction), study of kinetics by stopped-flow technique, relaxation techniques (temperature jump, pressure jump) and shock tube technique, flash photolysis and magnetic resonance method.	15
III	Surface Phenomena Surface active agents, classification of surface-active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), Kraft temperature, factors affecting the CMC of surfactants, counter ion binding to micelles, thermodynamics of micellization-phase separation and mass action models, solubilization, microemulsions. reverse micelles, surface films (electrokinetic phenomena), catalytic activity at surfaces.	15

IV	Transport Phenomena Diffusion coefficients, Fick's first and second laws, relation between flux and viscosity, relation between diffusion coefficient and mean free path, relation between thermal conductivity/viscosity and mean free path of a perfect gas, Einstein relation, Nernst-Einstein equation, Stokes-Einstein equation, Einstein-Smoluchowski equation.		15

List of Practicals	Contact Hours
<p>Conductometry</p> <ol style="list-style-type: none"> Conductometric titration of: (i) Strong acid vs. strong base, (ii) Strong acid vs. weak base, (iii) Weak acid vs. strong base, (iv) Weak acid vs. weak base, (v) $\text{CH}_3\text{COOH} + \text{HCl}$ vs. NaOH, (vi) CuSO_4 vs. NaOH. Determination of the equivalent conductance of weak acid (benzoic/ acetic acid) at several concentrations and the dissociation constant of the acid. Determination of the equivalent conductance of strong electrolytes such as HCl, KCl, KNO_3 and NaCl and the validity of Onsagar equation. Study of degree of hydrolysis of aniline hydrochloride. Determine the critical micelle concentration (CMC) of surfactants by conductivity method. <p>Colorimetry/Spectrophotometry</p> <ol style="list-style-type: none"> Verification of the Lambert-Beer's law using aqueous solutions of KMnO_4, $\text{K}_2\text{Cr}_2\text{O}_7$ and CuSO_4. Study of Iron-Tiron and Iron-Salicylic acid complexes. Determination of the composition of Potassium dichromate and potassium permanganate mixture spectrophotometrically. Determine the dissociation constant of an indicator spectrophotometrically. 	<p>120 (8 Hours per week, spread over two days)</p>
Total Contact Hours	120

Recommended Books/e-resources/LMS:

1. Yadav, J.B. *Advanced Practical Physical Chemistry*, 29th Ed., Goel Publishing House, 2022.
2. Harris, D.C. *Quantitative Chemical Analysis*, 10th Ed., Macmillan Learning, 2023.
3. Skoog, D.A., West, D.M., Holler, F.J., & Crouch, S.R. *Fundamentals of Analytical Chemistry*, 10th Ed., Cengage Learning, 2022.
4. Jain, P.C., & Narang, S.Y. *Practical Physical Chemistry*, Reprint 2023, Vishal Publishing Co.
5. Khosla, B.D., Garg, V.C., & Gulati, A. *Senior Practical Physical Chemistry*, 2023 Ed., R. Chand & Co.
6. Manhas, B.S., & Mehta, R.M. *Experimental Physical Chemistry*, 2022 Ed., Ane Books Pvt. Ltd.
7. Vogel, A.I. *Vogel's Textbook of Quantitative Chemical Analysis*, 6th Ed., Pearson Education, 2000.
8. Levitt, B.P. *Findlay's Practical Physical Chemistry*, 9th Ed., Longman, 1985.
9. Jain, P.C., Narang, S.Y. *Practical Physical Chemistry*, 14th Ed., Vishal Publishing Co., 2020.
10. Das, R.C., Behra, B. *Experimental Physical Chemistry*, Tata McGraw-Hill, 1983.
11. Bajpai, D.N. *Advanced Practical Physical Chemistry*, 2nd Ed., S. Chand Publishing, 2001.

DEC-1

Session: 2024-25

Part A - Introduction

Name of Programme	M.Sc. Chemistry		
Semester	III		
Name of the Course	Organic Chemistry Special- I		
Course Code	M24-CHE-305		
Course Type	DEC		
Level of the course	500-599		
Pre-requisite for the course (if any)	Chemistry at the Level of 400-499		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1: To understand the role of Molecular Orbitals in analysing Pericyclic Reactions.</p> <p>CLO 2: To interpret the stereochemical course of a Pericyclic Reaction and identify the product. To understand the concepts of aromaticity, non-aromaticity, anti-aromaticity, homoaromaticity, and pseudo-aromaticity, aromaticity in charged rings, and the application of $^1\text{H-NMR}$ in determining the aromatic character of annulenes.</p> <p>CLO 3: Focuses on light-induced reactions in carbonyl compounds (Paterno-Büchi reaction, photoreduction)</p> <p>CLO 4: Analyzes photochemistry of unsaturated systems (olefins, 1,3-butadiene), complex rearrangements: Di-π-methane, enone/dienone, Photo-Fries</p>		
Credits	Theory	Practical	Total
	4	0	4
Teaching Hours per week	4	0	4
Internal Assessment Marks	30	0	30
End Term Exam Marks	70	0	70
Max. Marks	100	0	100
Examination Time	3 hours		

Part B-Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Pericyclic Reactions Molecular orbital symmetry, frontier orbital of ethylene, 1,3-butadiene, 1,3,5 hexatriene and allyl system classification of pericyclic reactions. Woodward - Hoffmann correlation diagram.	15

	FMO & PMO approach, Electrocyclic reaction - conrotatory and disrotatory motions. $4n$, $4n+2$, allyl systems, Ring opening of cyclopropyl halides and tosylates, cycloadditions-antarafacial and suprafacial additions, $4n$ and $4n+2$ systems, 2+2 addition of ketenes, 1,3-dipolar cycloadditions and cheletropic reactions.	
II	<p>Pericyclic Reactions</p> <p>Sigmatropic Rearrangements-suprafacial and antarafacial shifts of H, sigmatropic shifts involving carbon moieties, retention and inversion of configuration, [3,3] and [5,5] sigmatropic rearrangements, Sommelet-Hauser, Claisen and Cope rearrangements. Introduction to ene reactions. Simple problems on Pericyclic reactions.</p> <p>Aromaticity</p> <p>Concept of aromaticity, non-aromaticity, anti-aromaticity, homoaromaticity, and pseudo-aromaticity. Aromaticity in charged rings and application of $^1\text{H-NMR}$ in determining the aromatic character of annulenes.</p>	15
III	<p>Photochemistry</p> <p>Excitation and excited states, Franck-Condon Principle, Jablonski diagram, energy transfer photosensitization, quenching, quantum yield, excimer and exciplex, P-type and E-type delayed fluorescence</p> <p>Photochemistry of carbonyl compounds (Norrish type I and type II changes, photoreaction of cyclic ketones, Paterno-Buchi reaction and Photoreduction. Photochemistry of olefins and 1,3-Butadiene (cis-trans isomerisation, dimerization, and cycloadditions).</p>	15
IV	<p>Photochemistry</p> <p>Di-π-methane rearrangement, enone and dienone rearrangements, photochemistry of aromatic compounds (substitution, isomerization, cyclization and cycloaddition reactions), Photo-Fries rearrangement, photolysis of nitrile esters and Barton reaction, Hoffman-Loeffler-Freytag reaction, photochemistry of vision and neonatal jaundice.</p>	15
Total Contact Hours		60
Suggested Evaluation Methods		
Internal Assessment: 30		End Term Examination: 70
➤ Theory	30	➤ Theory: 70
• Class Participation:	5	Written Examination
• Seminar/presentation/assignment/quiz/class test etc.:	10	
• Mid-Term Exam:	15	

Part C-Learning Resources

Recommended Books/e-resources/LMS:

1. Principles of Organic Synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional.
2. Pericyclic Reactions, S.M. Mukherji Macmilan India.
3. The Conservation of Orbital Symmetry, R.B. Woodward and R. Hoffmann" Verlag Chemie Academic Press.
4. Problem Solving approach to Orbital Symmetry, R.E. Lehr and A.P. Merchand.
5. Organic Reactions and Orbital Symmetry, T.L. Gilchrist and R.C. Storr, Cambridge University Press, Cambridge, 2nd Edn. 1979.
6. Organic Photochemistry, J Coxan & B. Halton, Cambridge University Press.
7. Introductory Photochemistry, A. Cox and T. Camp McGraw Hill.
8. Organic Photochemistry, V. Ramamurthy, CRC Press First Edition, 1997.
9. Organic Photocatalysts for Energy and Synthesis Emily R. Smith, James M. R. Narayanam
Publisher: Royal Society of Chemistry Year: 2024
10. Photoinduced Reactions in Organic Synthesis, Stefano Protti, Maurizio Fagnoni, Publisher:
Wiley-VCH, Year: 2020

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.			
Unit	Topics		Contact Hours
I	Drug Design and Development		15

	<p>Brief concept of therapeutic index, LD50, and ED50.</p> <p>The elementary idea about the following:</p> <p>The receptor role, neurotransmitters and receptors, ion channels, and their control. Membrane-bound enzymes—activation/deactivation. The chemical basis of the messenger induced a change of shape by the receptor. Design of agonists, antagonists and partial agonists. Structure-activity relationships (SAR).</p> <p>Prostaglandins: General introduction, nomenclature, and biological roles of prostaglandins. Chemical Synthesis of PGE₂ and PGF_{2α}</p>	
II	<p>Synthesis, General Mode of Action, and Medicinal Uses of the following Drugs:</p> <p>Antineoplastic Agents: Classification, Mechlorethamine, Chlorambucil, cyclophosphamide, carmustine, methotrexate, 6-mercaptopurine, paclitaxel (synthesis of paclitaxel excluded).</p> <p>Antimalarials: Classification, Chloroquine, primaquine, chloroguanide, pyrimethamine, Artemisinin and its potential derivatives (synthesis excluded).</p> <p>Analgesics, Antipyretics and Antiinflammatory agents: Morphine and related compounds (codeine and heroin), methadone, tramadol, aspirin, acetaminophen, indomethacin, mefenamic acid, ibuprofen, diclofenac, naproxen, celecoxib.</p> <p>Cardiovascular Drugs: Sorbitrate, Calcium channel blockers: verapamil, diltiazem, beta-blockers: atenolol.</p> <p>AIDS and drugs against HIV: Important drugs against HIV (nucleoside reverse transcriptase inhibitors) -AZT, ddI, ddC, d4T and 3TC (synthesis only of AZT).</p>	15
III	<p>Antibiotics</p> <p>Cell wall biosynthesis and protein synthesis inhibitors: Penicillins and semi-synthetic penicillins. synthesis, structure elucidation and medicinal uses of penicillin G, problems of sensitivity to acids, lactamases and narrow spectrum of activity, solving these problems leading to the development of penicillin V, oxacillin, cloxacillin, ampicillin, amoxicillin, carbenicillin and carfecillin.</p> <p>Cephalosporins - Discovery, structure elucidation and synthesis of cephalosporin-C</p>	15

IV	<p>Heterocyclic compounds</p> <p>Systematic (Hantzsch-Widman) nomenclature for monocyclic and fused ring systems.</p> <p>General synthesis and reactions (including mechanism) of the following:</p> <p>Five-membered heterocycles: pyrazole, imidazole, oxazole, isoxazole, thiazole, and isothiazole; comparison of their basic character.</p> <p>General reactivity of purines and pyrimidines.</p>	15

 9. Bioinorganic Chemistry, I. Bertini, H.B. Gray, S.J. Lippard and J.S. Valentine, University Science Books.
 10. Supramolecular Chemistry, J.M. Lehn, VCH.
 11. A Textbook of Quantitative Inorganic Analysis, A.I. Vogel; ELBS, London.
 12. Fundamentals of Analytical Chemistry; D.A. Skoog, O.M. West and F.J. Holler; W.B. Saunders.
 13. Dynamics of Chromatography Part I.; J.C. Gidding; Dekker, New York.

DEC-4

Session: 2024-25

Part A - Introduction

Name of Programme	M.Sc. Chemistry		
Semester	IV		
Name of the Course	Inorganic Chemistry Special- IV		
Course Code	M24-CHE-406		
Course Type	DEC		
Level of the course	500-599		
Pre-requisite for the course (if any)	Chemistry at the level of 400-499		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1: Understand and apply concepts of accuracy, precision, and various types of errors in analytical measurements, and evaluate data using statistical tools like F-test, t-test, and Chi-square test.</p> <p>CLO 2: Explain the principles, instrumentation, and applications of nephelometry and turbidimetry, and analyze factors affecting light scattering measurements.</p> <p>CLO 3: Describe electroanalytical methods including electrogravimetry, coulometry, amperometry, and voltammetry, and evaluate their use in quantitative analysis.</p> <p>CLO 4: Understand the principles and types of chromatography and ion-exchange techniques, and apply them for separation, purification, and analysis.</p> <p>CLO 5: Explain the working of ion-selective electrodes, gas and enzyme sensors, and apply them for specific ion measurements.</p> <p>CLO 6: Describe the principles and applications of thermal techniques like TGA, DTA, and DSC for material characterization.</p>		
Credits	Theory	Practical	Total
	4	0	4
Teaching Hours per week	4	0	4
Internal Assessment Marks	30	0	30
End Term Exam Marks	70	0	70
Max. Marks	100	0	100
Examination Time	3 hours		

Part B-Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
1	<p>Errors and Evaluation</p> <p>Definition of terms in mean and median. Precision-standard deviation, relative standard deviation. Accuracy-absolute error, relative error. Types of error in experimental data-determinate (systematic), indeterminate (or random) and gross. Sources of errors and the effects upon the analytical</p>	15

	<p>results. Methods for reporting analytical data. Statistical evaluation of data-indeterminate errors. Significance of the F test, the student 't' test and the Chi-test.</p> <p>Nephelometry and Turbidimetry</p> <p>Theory - light scattering, choice and comparison between nephelometry and turbidimetry, factors affecting measurement, instrumentation, applications.</p>	
II	<p>Electro analytical methods of Analysis</p> <p>Electrogravimetry: Current-voltage relationship during an electrolysis, decomposition potential, constant current electrolysis, constant cathode potential electrolysis, apparatus, electrodes, mercury cathode, applications physical properties of electrolytic precipitates, chemical factors of importance in electrodeposition.</p> <p>Electrolytical methods without cathode potential control</p> <p>Coulometric analysis: Coulometric methods of constant electrode potential and coulometric titrations.</p> <p>Apparatus and applications</p> <p>Amperometric titrations, anodic stripping voltammetry, and cyclic voltammetry</p>	15
III	<p>Chromatography</p> <p>General principles, types of chromatography, absorption chromatography, partition chromatography, vapour phase chromatography, paper and thin layer chromatography, retardation factor, retention volume, mechanism and efficiency of separations.</p> <p>Ion-Exchange: General principles, ion exchangers-natural and synthetic, ion-exchange capacity, purification of water and other applications.</p> <p>Solvent Extraction</p> <p>General Principles, extraction coefficients, Batch, continuous, and counter current extractions, applications.</p>	15
IV	<p>Ion selective electrodes</p> <p>Fundamental types of electrodes, gas sensors, ion sensors and enzyme electrodes, principle involved in measurements with ion selective electrodes with special reference to halide, sulphide and oxygen electrodes.</p> <p>Thermal Techniques</p> <p>Thermogravimetry, differential thermal analysis (DTA) and differential scanning calorimetry (DSC) principles and applications</p>	15

Part B- Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist of at least 4 parts covering the entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Statistical Thermodynamics-I (Continues) Partition function, Derivation of expressions for translational, vibrational, rotational, electronic energy, translational thermodynamic function of atoms and monoatomic molecules, calculation of absolute entropy of an ideal monoatomic gas, Sackur-Tetrode equation, diatomic molecules, Rotational and vibrational energies, entropy due to internal degrees of freedom. Rotational partition function, rotational partition function for polyatomic molecules, vibrational partition function.	15
II	Statistical Thermodynamics-II Determination and calculation of thermodynamic properties i.e. internal energy, entropy, Helmholtz and Gibbs free energy, ortho and para hydrogen states, free energy functions. Partition function and equilibrium constant, effect of nuclear spin, iso-molecular reaction, isotopic exchange reactions. Einstein theory and Debye theory of heat capacities of monatomic solids. Effect of change of zero-point energy on partition function and on thermodynamic properties like internal energy, Gibbs free energy, enthalpy, work function & entropy.	15
III	Advanced Statistical Mechanics	15

	Real gases, intermolecular potential and virial coefficients. Structure of liquids-definition of distribution and correlation functions, Thermodynamic functions of a fluid and radial distribution function, Spectroscopic techniques for liquid dynamic structure studies. Random walk problem in 1D. Theory of Brownian motion, Langevin theory, Fokker-Planck equation.	
IV	Quantum Statistics Bose - Einstein statistics, statistics of photon gas, gas degeneration, Fermi-Dirac statistics, Fermi -Dirac systems, extreme gas degeneration, slight gas degeneration, energy of Bosons & Fermi particles, specific heat of electron gas, Thermionic emission, comparison of Bose -Einstein and Fermi-Dirac statistics.	15

The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.			
Unit	Topics		Contact Hours
I	Advanced Chemical Kinetics London-Eyring-Polanyi method of calculation of energy of activation. Sato Method and Bond-Energy-Bond-Order (BEBO) Method, Application of activated complex theory of reaction rates. Temperature dependence of pre-exponential factor. Statistical distribution of molecular energies, Kassel's theory (RRK), Rice-Ramsperger-Kassel-Marcus (RRKM) theory, unimolecular reactions and its validity.		15
II	Reaction Dynamics Molecular beams, principle of cross-molecular beams. Molecular encounters and principal parameters, e.g. Impact parameter, Collision cross-section, Reaction cross-section and relation between reaction cross-section and reaction rate (single velocity). Dependence of collisional cross-section on translational energy. Solution Kinetics Ion-ion reaction, ion-dipole reaction and enzyme kinetics (effect of pH and temperature). Lineweaver-Burk plot for the analysis of enzymolysis. Reactions between polar molecules, kinetic salt, salt effect.		15
III	Applied Electrochemistry Corrosion: Forms of corrosion, Corrosion monitoring and prevention methods. Environmentally oriented electrochemistry: Electrochemistry of water splitting, electrolysis of sea water, electrochemical reduction of CO ₂ , Electrochemical sewage disposal, Electrochemical decontamination of soil.		15

	Ion Selective Electrodes Electrical Properties of membrane, glass electrode with special reference to H^+ , Na^+ , K^+ ions, operation of solid membrane electrode, operation of liquid membrane electrode, coated type ion electrode, Applications of ion-selective electrode in determination of some toxic metals and some anions (F^- , Cl^- , Br^- , I^- and NO_3^-).	
IV	Biophysical Chemistry Chemical bonds in biological systems; Properties of water; Thermodynamic principles in biological systems; Osmotic pressure, membrane equilibrium, muscular contraction and energy generation in mechanochemical system. Introduction to protein folding problem. Cell Membrane and Transport of Ions: Structure and functions of cell membrane. Active transport across cell membrane, irreversible thermodynamics treatment of membrane transport. Optical methods and applications: Optical techniques in biological systems: Absorption spectroscopy, Fluorescence spectroscopy, Linear and Circular Dichroism.	15

Examination Time	0	6 hours (Two sessions)	6 hours

Part B- Contents of the Course

List of Practicals	Contact Hours	
Refractometry 1. Determine the refractive index of simple organic liquids like methyl acetate, ethyl acetate, methanol, ethanol, n-hexane, chloroform. 2. Determine the refractivity and molar refractivity of some organic liquids like methyl acetate, ethyl acetate, methanol, ethanol, n-hexane, chloroform and hence find out the molar refractivities for CH ₂ , C, H and Cl. 3. Determine the composition of mixture of two liquids by refractive index measurements.	120 (8 Hours per week, spread over two days)	
Flame Photometry 4. Determination of Na ⁺ , K ⁺ , Ca ²⁺ and Mg ²⁺ in tap water, juice, electoral etc.		
Distribution Law 5. Determine distribution coefficient of ammonia between chloroform and water. 6. Determine the formula of the complex formed between copper (II) ion and ammonia using distribution method.		
Data-Handling/Representation 7. Using origin-Lab draw data in different styles of graphs. 8. Linear Curve fitting and calculation of regression coefficient by using EXCEL worksheet. 9. Calculate activation energy using thermal analysis data by single/multiple heating rate methods using EXCEL worksheet.		
Total Contact Hours		120

DEC-3

Session: 2024-25

Part A - Introduction

Name of Programme	M.Sc. Chemistry		
Semester	IV		
Name of the Course	Organic Chemistry Special- III		
Course Code	M24-CHE-405		
Course Type	DEC		
Level of the course	500-599		
Pre-requisite for the course (if any)	Chemistry as a subject at UG level		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO1: Understand oxidation reactions and reagents for major organic functional groups.</p> <p>CLO2: Explain reduction methods and mechanisms for hydrocarbons and functional groups.</p> <p>CLO3: Describe the preparation and applications of main-group organometallic reagents in organic synthesis.</p> <p>CLO4: Explain the role of transition-metal reagents in organic synthesis with mechanistic insight.</p> <p>CLO5: Apply oxidation, reduction, and organometallic strategies in planning organic syntheses.</p>		
Credits	Theory	Practical	Total
	4	0	4
Teaching Hours per week	4	0	4
Internal Assessment Marks	30	0	30
End Term Exam Marks	70	0	70
Max. Marks	100	0	100
Examination Time	3 hours		

Part B-Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Oxidation Introduction, Different oxidative processes, Hydrocarbons- alkenes, aromatic rings, saturated C-H groups (activated and unactivated). Alcohols, diols, aldehydes, ketones, ketals and carboxylic acids. Amines, hydrazines, and sulphides.	15
II	Reduction	15

	Introduction, Different reductive processes, Hydrocarbons—alkanes, alkenes, alkynes and aromatic rings. Carbonyl compounds-aldehydes, ketones, acids and their derivatives. Epoxides. Nitro, nitroso, azo and oxime groups. Hydrogenolysis.	
III	Organometallic Reagents Principle, preparations, properties, and applications of the reagents of the following metals/non-metals in organic synthesis with mechanistic details: Li, Mg, Zn, Cu, S, Si and B..	15
IV	Transition Metals in Organic Synthesis Preparations and applications of the reagents of the following metals in organic synthesis with mechanistic details: Pd, Ni, Fe, Co, Cr and Ti compounds.	15
Total Contact Hours		60
Suggested Evaluation Methods		
Internal Assessment: 30		End Term Examination: 70
➤ Theory	30	➤ Theory: 70
• Class Participation:	5	Written Examination
• Seminar/presentation/assignment/quiz/class test etc.:	10	
• Mid-Term Exam:	15	
Part C-Learning Resources		
Recommended Books/e-resources/LMS:		
<ol style="list-style-type: none"> 1. Some Modern Methods of Organic Synthesis, W. Carruther, Cambridge Univ. Press. 2. Advanced Organic Chemistry, Reactions Mechanism and Structure, J. March, John Wiley. 3. Principles of Organic Synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional. 4. Advanced Organic Chemistry and Reaction Mechanisms, Reinhard Bruckner, Academic Press. 5. Organic Chemistry, Jonathan Clayden, Nick Greeves, and Stuart Warren, Oxford University Press. 		

DEC-4

Session: 2024-25

Part A - Introduction

Name of Programme	M.Sc. Chemistry		
Semester	IV		
Name of the Course	Organic Chemistry Special- IV		
Course Code	M24-CHE-408		
Course Type	DEC		
Level of the course	500-599		
Pre-requisite for the course (if any)	Chemistry as a subject at UG level		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO1: Understand the definition, classification, biological role, isolation, and structure elucidation of alkaloids and terpenoids.</p> <p>CLO2: Explain the structure, stereochemistry, synthesis, and biosynthesis of representative alkaloids and terpenoids.</p> <p>CLO3: Apply the disconnection approach to identify synthons, functional group interconversions, and C-X/C-C bond disconnections.</p> <p>CLO4: Use advanced retrosynthetic strategies including umpolung, acetylene/nitro chemistry, ring synthesis, and ketene reactions.</p> <p>CLO5: Select and apply protective groups and two-group C-C disconnections to achieve chemo-, regio-, and stereoselective organic synthesis.</p>		
Credits	Theory	Practical	Total
	4	0	4
Teaching Hours per week	4	0	4
Internal Assessment Marks	30	0	30
End Term Exam Marks	70	0	70
Max. Marks	100	0	100
Examination Time	3 hours		

Part B-Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	<p>Alkaloids Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, role of alkaloids in plants. Structure, stereochemistry, synthesis, and biosynthesis of the following: Ephedrine, Quinine and Reserpine</p>	15

II	Terpenoids: Introduction, classification, essential oils, methods for extraction of essential oils, Isoprene and special isoprene rule. General aspects of structure determination of terpenoids. Structure elucidation and synthesis of Geraniol, α -terpineol, α -pinene, camphor, farnesol and squalene.	15
III	Disconnection Approach-I An introduction of synthons and synthetic equivalents, general principles of the disconnection approach, functional group interconversions, the importance of the order of events in organic synthesis, one group C-X and two group C-X disconnections, one group C-C disconnection, chemoselectivity, regioselectivity, regiospecificity, stereoselectivity, and stereospecificity. Disconnection Approach-II Reversal of polarity, use of acetylene and aliphatic nitro compounds in organic synthesis, synthesis of three-membered rings, uses of ketenes in organic synthesis, synthesis of five and six-membered rings.	15
IV	Disconnection Approach-III Protective Groups: Introduction, principle of protection of alcoholic, amino, carbonyl, and carboxylic groups, Protection and deprotection of Alcohols: ethers, silyl ethers, acetals, esters, Carbonyl Groups: acetals/ketals, dithioacetals/dithioketals, Amino Groups: carbamates, amides, Carboxylic Groups: esters, silyl esters, amides. Two group C-C disconnections: Diels Alder reactions, 1,3-difunctionalized compounds and α,β -unsaturated carbonyl compounds, Control in carbonyl condensations, 1,5-difunctionalized compounds-Michael addition and Robinson Annelation.	15
Total Contact Hours		60
Suggested Evaluation Methods		
Internal Assessment: 30		End Term Examination: 70
➤ Theory	30	➤ Theory: 70

Recommended Books/e-resources/LMS:		
<ol style="list-style-type: none"> 1. I.R. Finar: Organic Chemistry, Pearson Education India Publication, 5th edition (2002). 2. A.L. Lehninger Biochemistry. 3. J. Mann, R.S. Davidson, J.B. Hobbs: Natural Products - Chemistry and Biological significance, New York : Wiley Publication, 1st edition, 1994. 4. J. Singh and J. Singh: Natural Products Chemistry, Pragati Prakashan 9th edition (2019). 5. P.S. Kalsi: The Chemistry of Natural Products, Alpha Science Publication (2013). 6. Att-ur-Retiman, M.I. Choudhary: New Trends in Natural Products chemistry, Harwood Academic 		

- Publishers, Amsterdam (1998).
7. Designing Organic Synthesis, S. Warren, Wiley.
 8. Some Modern Methods of Organic Synthesis, W. Carruthers, Cambridge Univ. Press.
 9. Advanced Organic Chemistry Reactions, Mechanisms and Structures, J. March, Wiley.
 10. Advanced Organic Chemistry Part B. F.A. Carey and R.J. Sundberg, Plenum Press.
 11. Principles of Organic Synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional.
 12. Structure and Mechanism in Organic Chemistry, C. K. Ingold, Cornell University Press.
 13. Advanced Organic Chemistry and Reaction Mechanisms, Reinhard Bruckner, Academic Press.
 14. Organic Chemistry, Jonathan Clayden, Nick Greeves, and Stuart Warren, Oxford University Press.

PC-9

Session: 2024-25

Part A - Introduction

Name of the Programme	M.Sc. (Chemistry)		
Semester	IV		
Name of the Course	Organic Chemistry Special Practical- III		
Course Code	M24-CHE-411		
Course Type	PC		
Level of the course	500-599		
Pre-requisite for the course (if any)	Chemistry as a subject at UG level		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1: Perform multi-step organic synthesis involving named reactions, rearrangements, and heterocyclic transformations.</p> <p>CLO 2: Apply green and classical synthetic methods to prepare pharmaceutically relevant compounds like paracetamol and aspirin.</p> <p>CLO 3: Analyze and interpret physical and chemical data for synthesized compounds using standard characterization techniques.</p> <p>CLO 4: Demonstrate proficiency in purification techniques such as recrystallization, distillation, and chromatography.</p> <p>CLO 5: Correlate reaction mechanisms with experimental outcomes in the synthesis of complex organic molecules.</p>		
Credits	Theory	Practical	Total
	0	4	4
Teaching Hours per week	0	8	8
Internal Assessment Marks	0	30	30
End Term Exam Marks	0	70	70
Max. Marks	0	100	100
Examination Time	0	6 hours (Two sessions)	6 hours

Part B - Contents of the Course

List of Practicals	Contact Hours
<p>1. Organic Synthesis</p> <p>(i) Benzophenone, Benzophenoneoxime, Benzanilide (Beckmann Rearrangement).</p> <p>(ii) Thiamine hydrochloride catalyzed synthesis of benzoin and conversion to benzil and benzylic acid</p> <p>(iii) Photoreduction of benzophenone to benzopinacol and subsequent conversion to benzopinacolone</p> <p>(iv) Preparation of 1, 1-bis-2-naphthol from 2-naphthol (Radical coupling reaction)</p> <p>(v) Phenol — salicylaldehyde — coumarin (Heterocyclic synthesis)</p> <p>(vi) Resorcinol — resacetophenone — Chalcone</p> <p>(vii) Acridone from anthranilic acid</p> <p>(viii) Benzillic acid from benzoin</p> <p>(ix) Pyrazolline from acetophenone</p> <p>(x) Chlorobenzene — 2,4-dinitrochlorobenzene — 2,4-dinitrophenol</p> <p>Any other multi-step reaction as per the requirement.</p> <p>2. Synthesis & characterization of some organic compounds of medicinal interest: Paracetamol, aspirin, phenyltoin, phenylbutazone, DEET, etc.</p> <p>All the students must check the progress of reaction and purity of Final products for all the stages of preparation by Thin layer Chromatography.</p>	<p>120 (8 Hours per week, spread over two days)</p>

Session: 2024-25			
Part A - Introduction			
Name of Programme	M.Sc. Chemistry		
Semester	IV		
Name of the Course	Skills in Chemistry		
Course Code	M24-EEC-415		
Course Type	EEC		
Level of the course	500-599		
Pre-requisite for the course (if any)	Chemistry as a subject at UG level		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1: Apply Chemdraw software to accurately draw simple organic molecules and chemical structures, enhancing skills in molecular representation and structure-based communication.</p> <p>CLO 2: Demonstrate the ability to use Mendeley software for efficient reference management, citation formatting, and organization of scientific literature relevant to chemistry.</p> <p>CLO 3: Utilize Origin software to plot, analyze, and interpret scientific data using linear fitting and other basic graphical tools, improving data presentation and analysis skills.</p> <p>CLO 4: Explore molecular visualization tools such as VMD or BioMol, and develop the ability to visualize, manipulate, and interpret molecular structures and biomolecular models.</p> <p>CLO 5: Integrate digital tools in chemical research and reporting, showing proficiency in software commonly used for chemical communication, data analysis, and literature management.</p>		
Credits	Theory	Practical	Total
	1	1	2
Teaching Hours per week	1	2	3
Internal Assessment Marks	10	5	15
End Term Exam Marks	20	15	35
Max. Marks	30	20	50
Examination Time	3 hours	3 hours	
Part B-Contents of the Course			
<p>Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.</p>			
Unit	Topics		Contact Hours
I	Introduction to Chemdraw software and their basic application in Chemistry:- drawing of simple organic molecules.		4

II	Introduction to Mendeley software and their basic application in Chemistry	3
III	Introduction to Origin software and their basic application in Chemistry:- Linear Plot & fit,	4
IV	Introduction to VMD/ Biomol and their basic application in Chemistry	4
V*	<p>Practical:</p> <p>1: Structure Drawing and Visualization Using ChemDraw: Drawing of simple organic molecules: alkanes, alkenes, alkynes, and aromatic compounds, Representation of functional groups, reaction mechanisms, and stereoisomers, Generating IUPAC names and molecular formulae using ChemDraw, Importing/exporting chemical structures in various formats (e.g., .mol, .cdx), Use of structure clean-up and templates.</p> <p>2. Reference Management Using Mendeley: Creating and managing a personal Mendeley library, Inserting citations and bibliographies in Word documents using Mendeley Plugin, Organizing PDFs and annotating research papers, Generating reference lists in different citation styles (ACS, APA, etc.), Group collaboration and sharing references.</p> <p>3. Data Analysis and Plotting Using Origin: Introduction to Origin interface and workbook creation, Importing experimental data (e.g., titration, conductivity), Plotting linear, polynomial, and scatter plots, Performing linear fit and determining slope, intercept, and R^2, Customizing graphs (axes, legends, colors) and exporting high-quality images for reports/publications.</p> <p>4. Molecular Visualization Using VMD/BioMol: Introduction to VMD/BioMol interface and loading molecular structures (PDB files), Creating basic molecular animations and exporting snapshots, Exploring molecular interactions and dynamics in simple systems.</p>	30

Part B-Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist at least 4 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
1	<p>Introduction</p> <p>Importance of polymers. Basic concepts: Monomers, repeat units, degree of polymerization. Polymer synthesis criteria:- Linear, branched and network polymers. Classification of polymers. Polymerization: condensation, addition, radical chain-ionic and co-ordination and copolymerization in homogeneous</p>	15

	and heterogeneous systems. Polymerization Techniques:- Mass (bulk), suspension, emulsion and solution processes.	
II	Polymer Characterization: Average molecular weight concept: Number, Weight and Viscosity average molecular weight. Poly dispersity and molecular weight distribution. The practical significance of molecular weight. Measurement of molecular weight by End group, viscosity light scattering, cryoscopy, ebulliometry osmometry, gel permeation chromatography and ultracentrifugation methods. chemical analysis of polymers.	15
III	Structure and Properties: Configuration and conformation of polymers, nature of molecular interactions in polymers, random chain model and RMS end-to-end distance. Crystal structures of polymers. Morphology of crystalline polymers, Lamellae, spherulites, strain-induced morphology, glass transition temperature (T _g), factor affecting glass transition temperature, Effect of chain flexibility and other steric factors, entropy and heat of fusion. Effects of molecular weight and melting point on glass transition temperature, Mechanical properties- tensile strength, flexural strength, fatigue, impact, Tear resistance, hardness and abrasion resistance, creep and stress relaxation.	15
IV	Polymer Processing: Plastics, elastomers and fibers. Compounding. Processing techniques: Calendaring, die casting, film casting, Moulding:- injection, blow, compression, extrusion, reinforcing and fiber spinning. Preparation, Properties and applications of Commercial Polymers: Polyethylene, Polyvinyl chloride. Introduction to biodegradable polymers- polylactic acid (PLA), polyglycolic acid (PGA): preparation properties and applications.	15

Unit	Topics		Contact Hours

I	<p>Metal Ions in Biological Systems: General survey of essential and trace metals, Disturbing factors in metabolic process and causes of diseases, different classes of drugs.</p> <p>Alkali and alkaline earth metals in biological systems: Ionophores, active transport of cations across membranes, sodium pump, Calcium pump, Calcium carriers, role of carriers in muscle contraction, blood clotting and hormones.</p> <p>Interaction of metal ions with Nucleotides: Metal ions in nucleotide systems, effect of metal ions on nuclei acids.</p>	15
II	<p>Oxygen carriers: Porphyrins, metalloporphyrins, Hemoproteins, structure and functions of haemoglobin, myoglobin, hemocyanins, hemerythrin and synthetic oxygen carrier model systems.</p> <p>Electron transfer in biological systems: Structure and function of metalloproteins in electron transport processes-cytochromes and iron-sulfur proteins, Biological nitrogen fixation, Nitrogenase, model for nitrogenase, metal-N₂ complexes.</p> <p>Metal transport and storage: Transferrin, Ferritin, Siderophores</p>	15
III	<p>Enzymes Introduction and historical perspective, chemical and biological catalysis, and remarkable properties of enzymes like catalytic power, specificity including reaction specificity, substrate specificity, stereospecificity. Nomenclature and classification, extraction and purification. Fischer's lock and key and Koshland's induced fit hypothesis, concept, and identification of active site by the use of inhibitors and affinity labelling. Enzyme kinetics, Michaelis-Menten and Lineweaver-Burk plots, reversible and irreversible inhibition.</p> <p>Metalloenzymes : Zinc Enzymes-Carboxypeptidase & Carbonic anhydrase, Iron Enzymes-Catalase, peroxidase & cytochrome P- 450 Copper Enzymes – Superoxide dismutase, blue copper proteins, Coenzymes-Vitamins B12</p>	15
IV	<p>Steroids: Isolation and nomenclature of steroids. Structure elucidation, synthesis (Woodward) and stereochemistry of cholesterol. Methods for the following conversions.</p> <ol style="list-style-type: none"> Cholesterol → Testosterone Cholesterol → Progesterone, Cholesterol → 5-α and 5-β-cholic acids. <p>Johnson's hydrochrysenone approach towards the synthesis of Androsterone.</p>	15
Total Contact Hours		60
Suggested Evaluation Methods		
Internal Assessment: 30		End Term Examination: 70
> Theory	30	> Theory: 70
• Class Participation:	5	Written Examination
• Seminar/presentation/assignment/quiz/class test etc.:	10	
• Mid-Term Exam:	15	
Part C-Learning Resources		
Recommended Books/e-resources/LMS:		
<ol style="list-style-type: none"> I.R. Finar: Organic Chemistry, Pearson Education India Publication, 5th edition (2002). J.E. Huheey: Inorganic Chemistry: Principles of Structure & Reactivity, Pearson Publication, 4th edition (2006). 		

3. S.J. Lippard, J.M. Berg: Principles of Biochemistry, University Science Books (1994).
4. G.L. Miessler and D.A. Tarr: Inorganic Chemistry, Prentice Hall; 3rd edition (2003).
5. A.L. Lehninger Biochemistry.
6. J. Mann, R.S. Davidson, J.B. Hobbs: Natural Products - Chemistry and Biological significance, New York : Wiley Publication, 1st edition, 1994.
7. J. Singh and J. Singh: Natural Products Chemistry, PragatiPrakashan 9th edition (2019).
8. P.S. Kalsi: The Chemistry of Natural Products, Alpha Science Publication (2013).
9. Att-ur-Retiman, M.I. Choudhary: New Trends in Natural Products chemistry, Harwood Academic Publishers, Amsterdam (1998).
